COMPLETED PROJECT

Darling Exchange, Darling Harbour

Finding innovative solutions to
optimise the glass façade beneath
the bold wooden exterior.

sharvainprojects.com

The Darling Exchange was designed to “create a new type of monument” in Sydney’s revitalised Haymarket district. Underneath the unique wooden screen we designed a distinctive glass façade with louvres and operable glass walls in between the building structure, providing shelter from the elements while maximising thermal comfort and visual connections.

Stacking doors

Rather than using fixed doors as originally designed, we integrated a series of stacking doors to allow better utilisation of external spaces.

Multi-trade construction

Working closely with Lend Lease, we devised a unique construction methodology to enable multiple trades to work simultaneously to meet target delivery dates.

Oversized steel awning

We purposely beefed up the solid steel awning above the ground floor to provide fire separation between the retail and commercial sections of the building.
