COMPLETED PROJECT

Opera Residences

Creating an eye-catching façade of curved and coloured glazing for a new Sydney Harbour landmark.

Low-E glazing

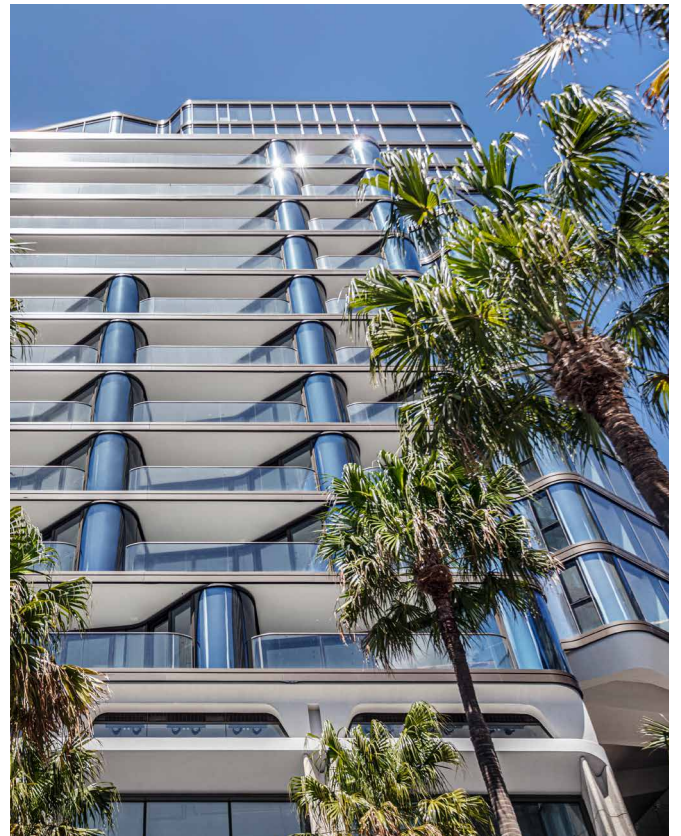

We installed over 1,150 façade panels of low-emissivity glass in the 19-level window wall façade, designed to maximise acoustic performance and optimise thermal comfort for residents.

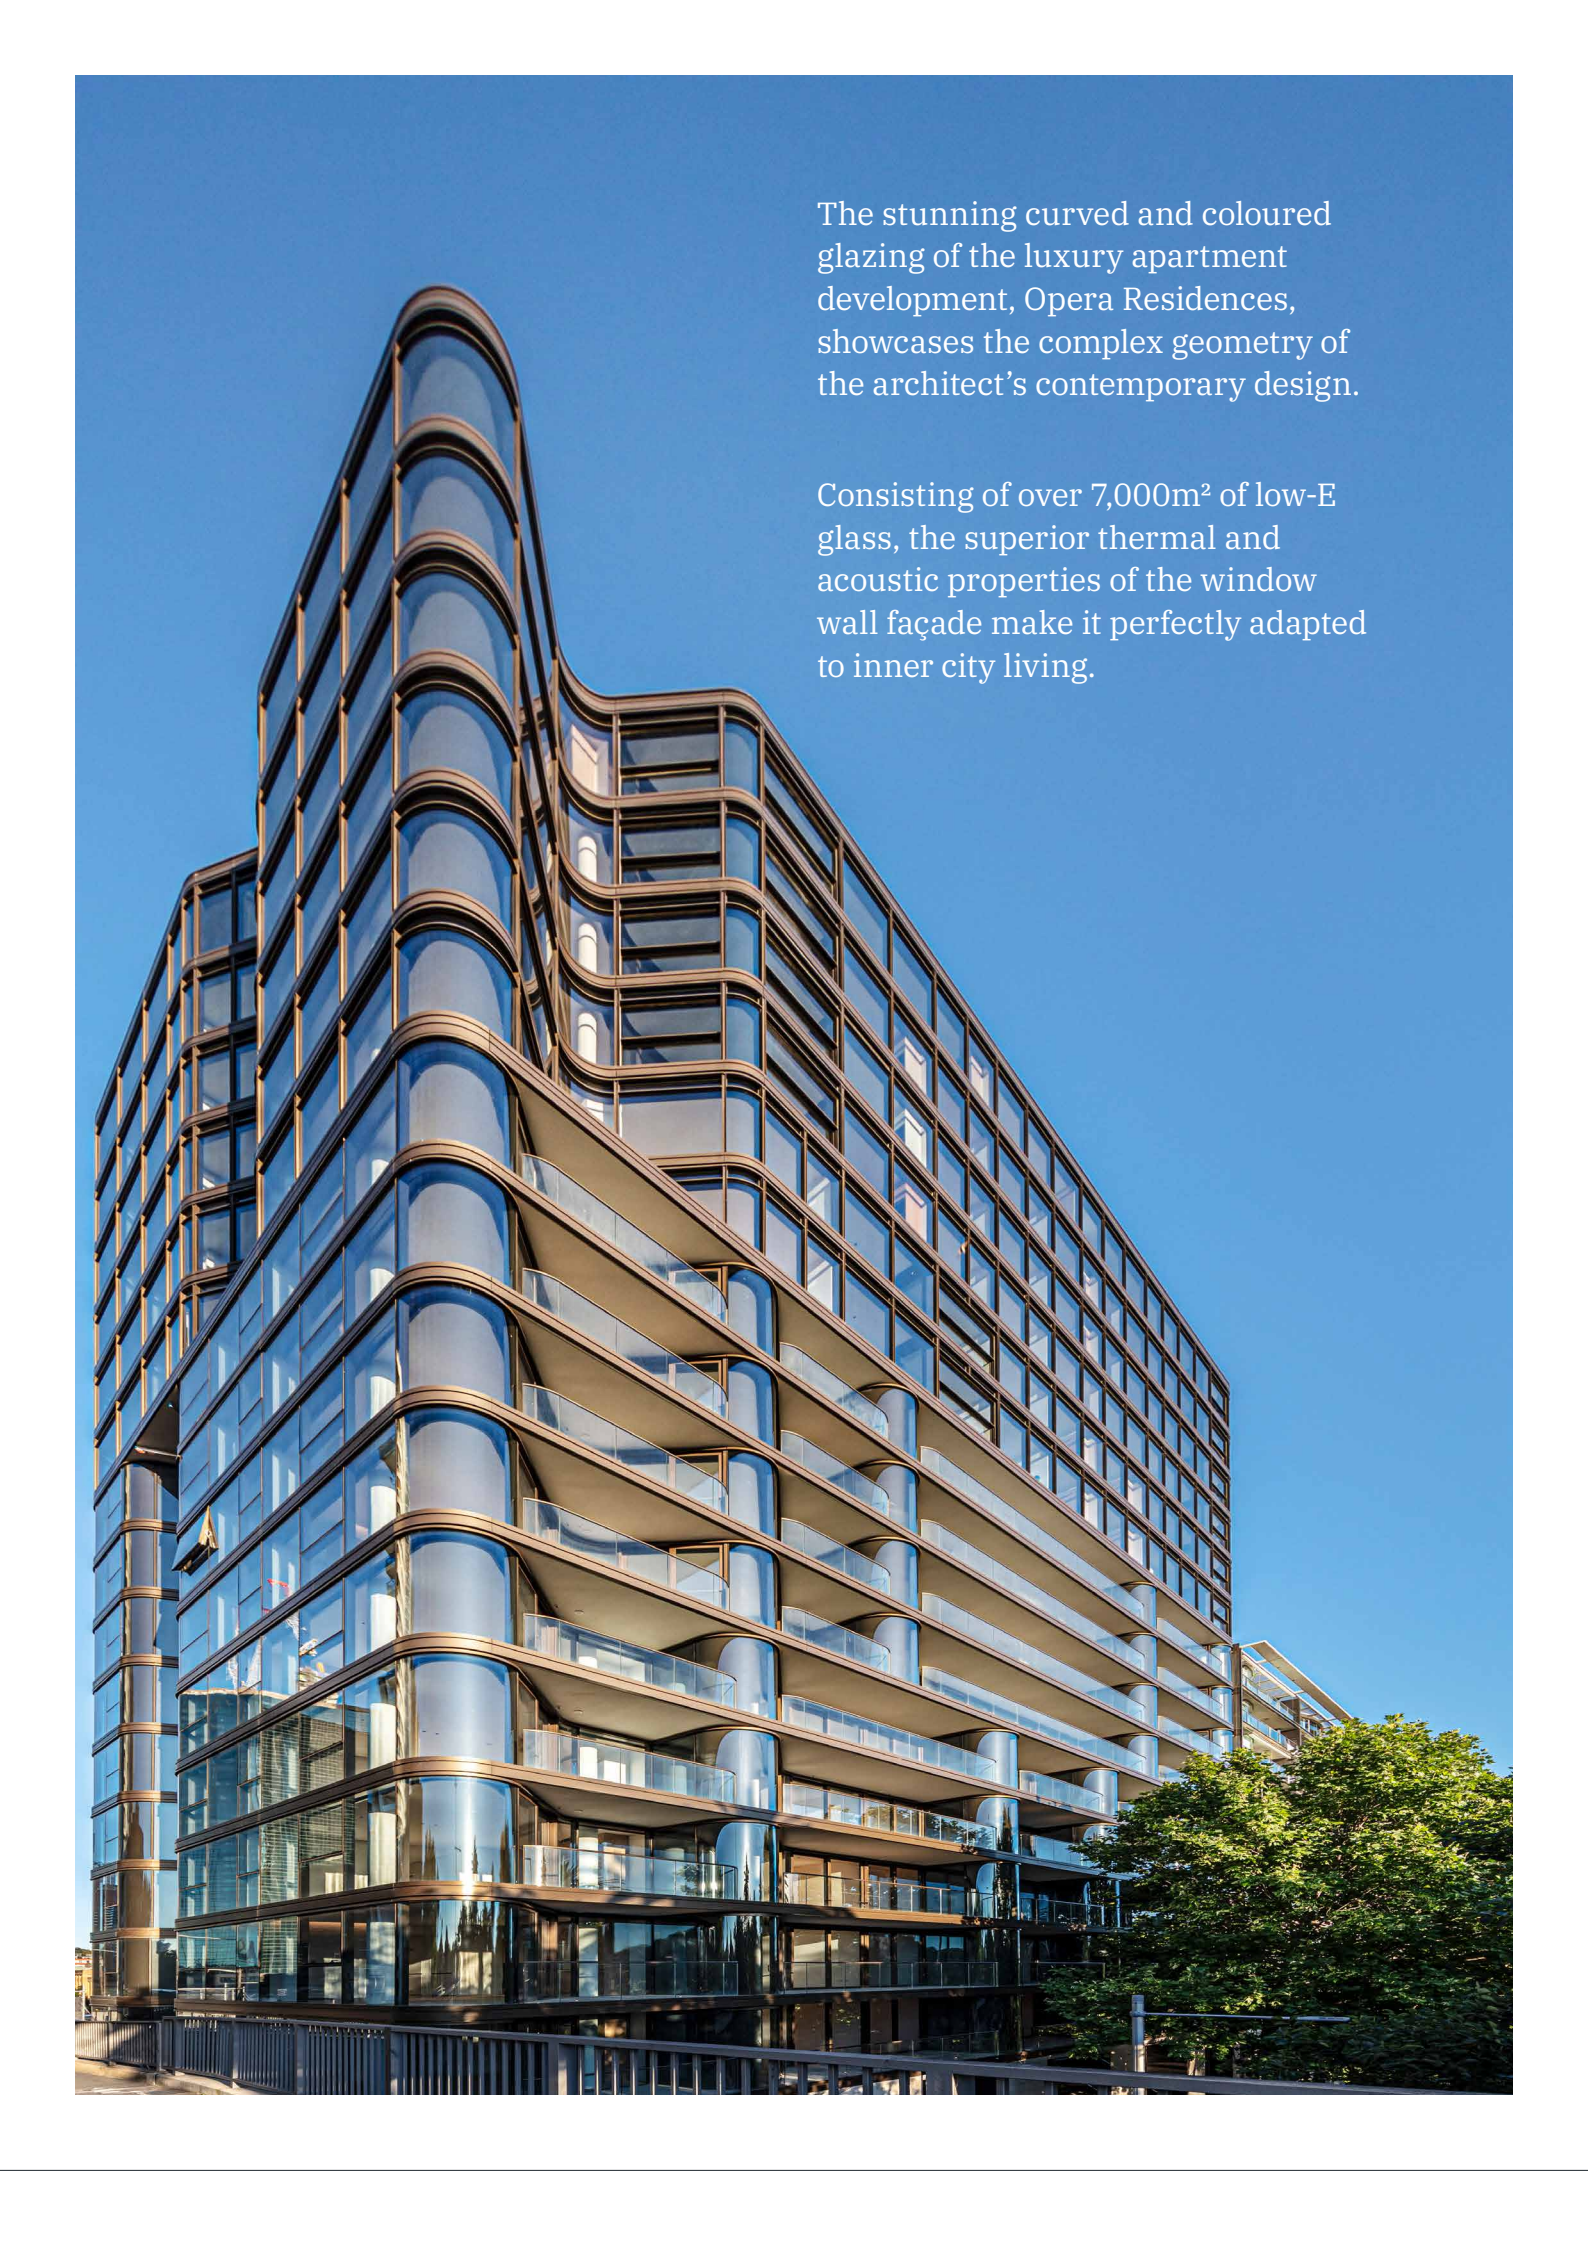

High performance coating

The coating of the façade panels was specifically developed to withstand the curving process while meeting high thermal and solar performance standards.

Multiple curved glazing systems

To complement the façade we supplied and installed curved glass glazing systems for the shopfronts, doors and operable walls, awnings, canopies and roof components.

The stunning curved and coloured glazing of the luxury apartment development, Opera Residences, showcases the complex geometry of the architect's contemporary design.

Consisting of over 7,000m² of low-E glass, the superior thermal and acoustic properties of the window wall façade make it perfectly adapted to inner city living.
