COMPLETED PROJECT

ICC & Theatre – Darling Harbour Live

Embracing the unconventional to
enhance the appearance and functionality
of the unique folded façades.

The unique shape and prime waterfront location of the International Convention Centre (ICC) and Theatre demanded a different design approach compared with conventional buildings. We embraced the unconventional to enhance the appearance and functionality of the unique folded façade and optimise the 3D nature of the architect's design.

Darling Harbour Live
Theatre Main Entry

Irregular sun shading

We designed and fabricated sun shading of irregular shapes and positions, adding an extra dimension to the uniquely-shaped building.

Sloped 3D glass

To create a stunning 3D effect, we applied specially shaped façade mullions capable of accommodating variable façade angles.

Variable pitch adaptors

We used variable pitch adaptors at critical locations to enhance the façade.
